

## 2015 - UP SEATBELT OVERRIDE

Thank you for purchasing XTC Motorsports Seatbelt override. The factory computer system knows when the safety belt is not latched and limits the cars speed for safety. When removing the factory safety belts and installing 4 or 5-point harnesses it will need to be bypassed. This plug and play system plugs into the car and bypasses the system. The Remote version has a switch attached so that you can put the car in safe mode for security. Just hide the switch where you only you know, and the car will be limited.

**For more details on installation go to [www.xtcinstall.com](http://www.xtcinstall.com)**

Please read the instructions fully and familiarize yourself with the components before starting the install.

Quick Install Guide.

1. Remove Seats
2. Plug override into car harness, **go to step 4 if unit has remote option**
3. Remove center plastic tunnel.
4. Drill a 3/4" hole in the plastic tunnel in an inconspicuous place
5. Install Switch on hole
6. Attach the wires from adapter plug into switch and reinstall console and seats
7. Verify operation, Start the car and verify that it has full power.
8. If purchased with the remote switch, test in both positions to verify limited power and full power.
